

Southwold Pies

Organise files and folders

- Organise **files** into **folders**

```
.CSS into STYLES folder
.JS into JS folder
graphics into MEDIA folder
font files into FONTS folder
```

- In the head of **index.html**, load the stylesheets, in **order**.

```
<link rel="stylesheet" href="styles/filename.css">

normalize.css, pies.css, icons.css, tablet.css
```

Tablet.CSS

- Put all of the CSS in tablet.css inside a **media query** . This will take effect, when the user widens the screen, beyond the mobile first layout.
- Add a rule in **tablet.css** to hide the **#featured** menu.

Footer

- Make this a responsive sentence : it displays **Follow us on Twitter** when narrow, and the full sentence when wide. (HINT : Wrap part of the sentence in **span id="extended"**)

Icon fonts

- Add icon fonts to each of the paragraphs in **section class="info"** . Add empty spans to do this. Use the class names **icon_pie**, **icon_award**, **icon_gift**, **icon_deliver**.

```
<span class="icon_pie"></span>
```

-
- Use the **fonts** folder and **icons.css** file.

Pie buttons

- Add properties to the **remarkable_pie** CSS rule in **pies.css** to make it display as a rounded touch-friendly button.

```
.remarkable_pie {  
    background-color: ....  
    border-radius: ....  
    color: ....  
    font-weight: ....  
}
```

Conditionally load the images.

- Conditionally load the four pie images, if the viewport is wide.
- Add **jQuery** and **ajax.js** script tags to the HTML, just before the closing BODY tag.
- Review **ajax.js** and the **data-src** attributes in the HTML
- Add a comment in HTML explaining how this works.
